

# Making Colour the Hero of Your Photography

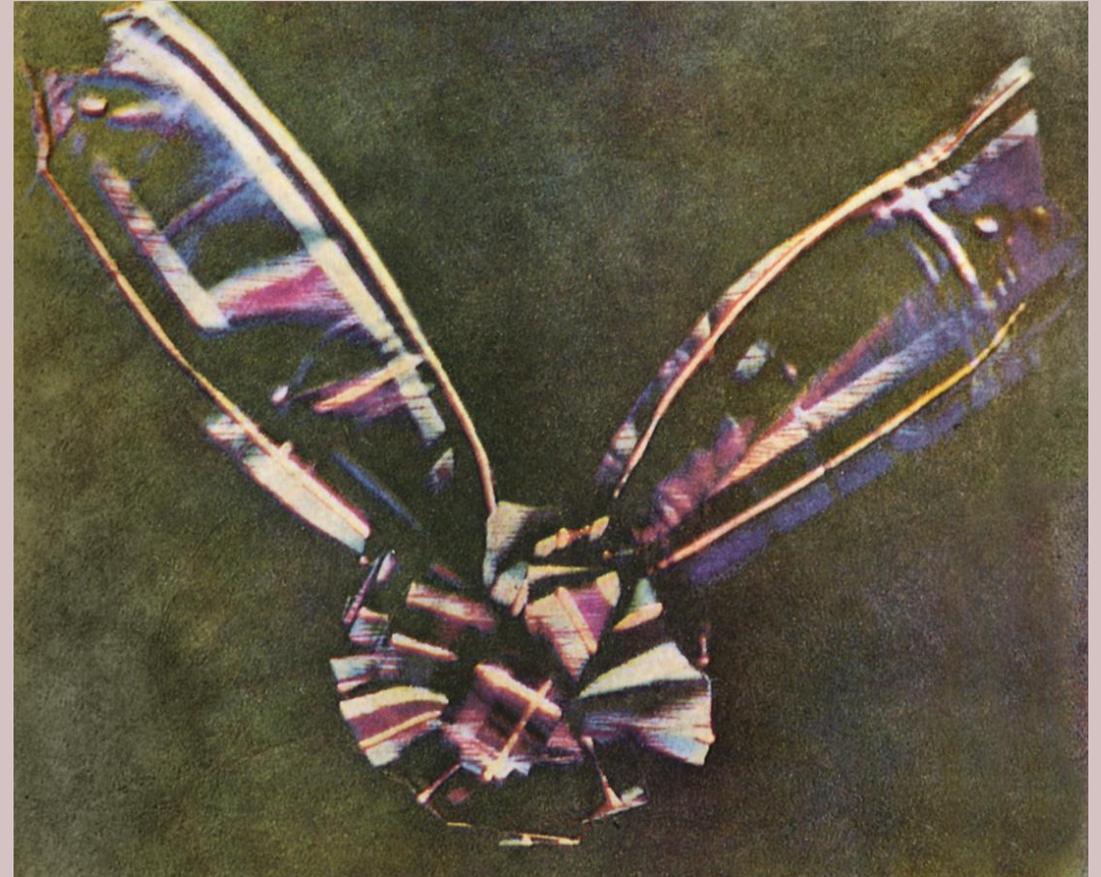

Wizard of Oz 1939

# Overview

- A brief History of Colour Photography
- Understanding Colour Theory in Photography
- Techniques for Focusing on Colour
- Post-Processing colour photography

1<sup>st</sup> colour photograph using three colour process 1861

**The next competition theme will be 'Make Colour the Hero' This section will be print.**

**Deadline 20<sup>th</sup> / 27<sup>th</sup> January**

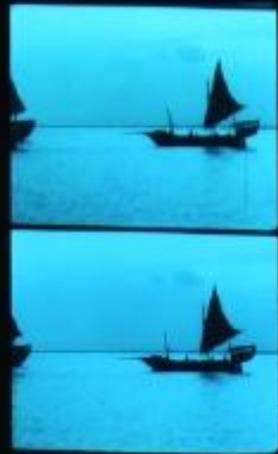

# Hand Colouring 1900s

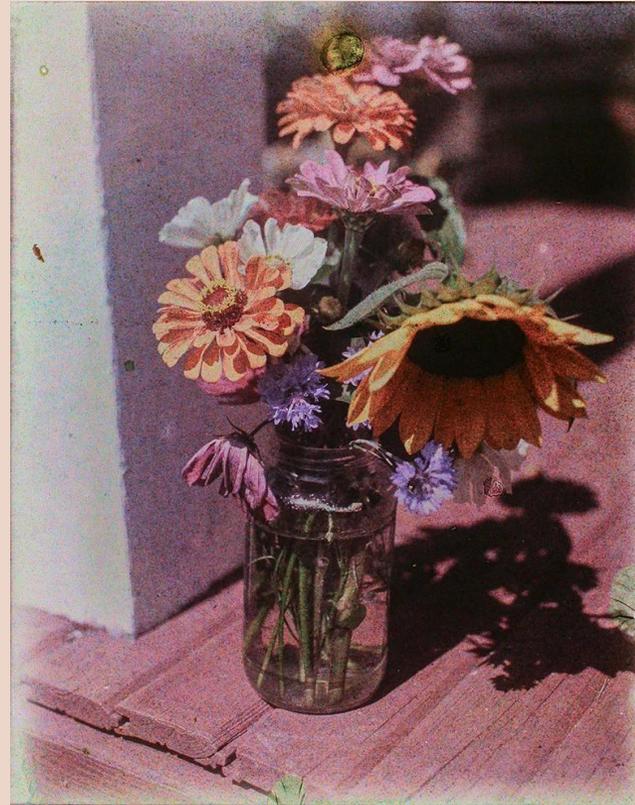

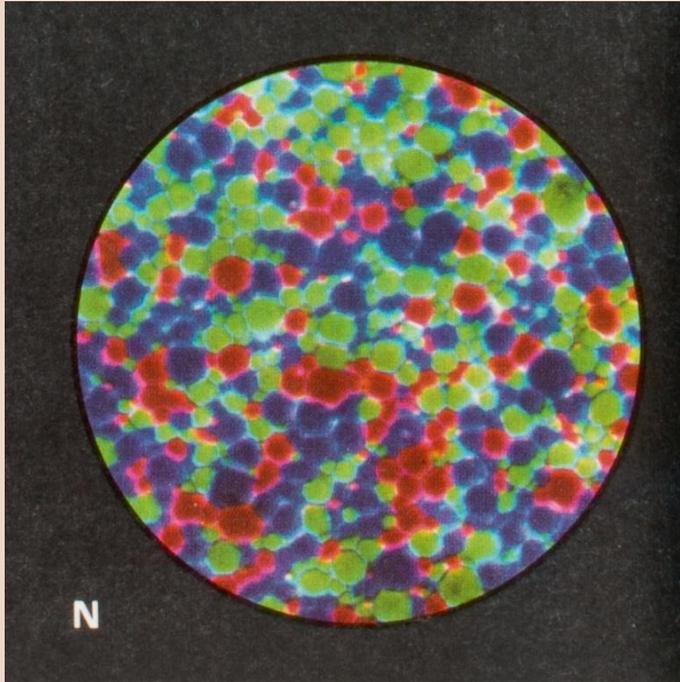

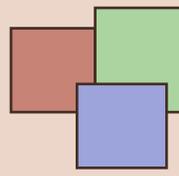

Loie Fuller film 1905

# Tinting and Toning 1910s

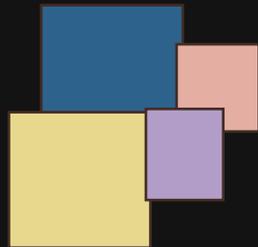

# 1907 Autochrome

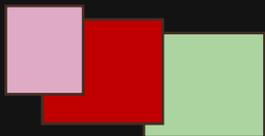

Tiny grains of potato starch dyed red, green and blue are dusted over a photographic plate, in between emulsions.

When exposed to light the fine mosaic of grains result in an illusion of colour. This process lasted from 1907 to 1935

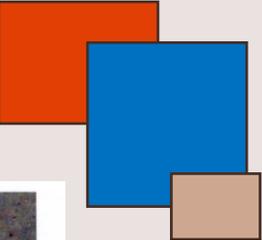

1920s Hand Tinted and  
early 3 colour process

Violet Blaklock V&A

# 1930s Vivex Process Madame Yvonde

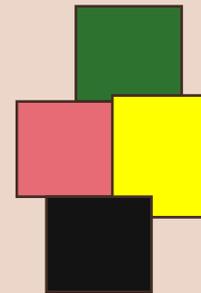

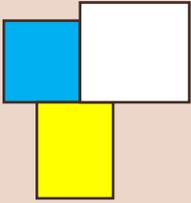

**Figure 3.22 VIVEX PRINT**  
a) Madame Yvonde, *Orchids*, ca. 1933. Vivex print. National Media Museum, Bradford, U.K. (inv. 2003-5001-2-20713).  
b) Detail (10×). c) Detail (50×).

Cyan, Magenta, Yellow & Black – 3 colour process producing vibrant colour from black and white filtered negatives

1930s - 3 colour Carbro Process – vibrant colour

3 black and white negatives, each with a blue, red or green filter are combined to produce a colour print.

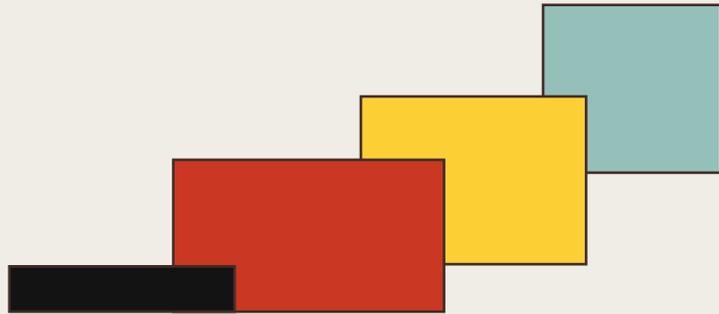

Still Life by Paul Outerbridge and Frida Khalo by Nikolas Muray

# Kodachrome 1935 - 2009

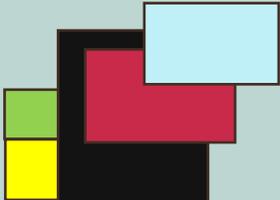

A colour negative film achieving vibrant high contrast colour in processing.

John Hinde Circus 1943 using Kodachrome

# 1950s The golden age of vibrant colour

Fred Herzog 1958

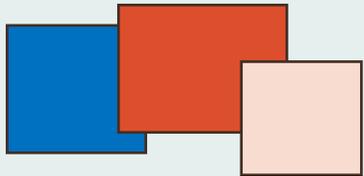

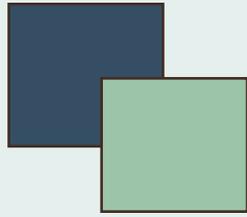

Richard Avendon Funny Face 1958

# 1960s

Gordon Parks

Contrast and Harmony

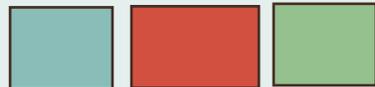

1970s Softer tones, faster kodachrome (higher iso) more light.

Joel Meyerowitz Cape Light 1977

James Barnor Ghana 1971

1980s

Colour Clashing

Guy Bourdin – Charles Jourdan Ad

Raghubir Singh - Kashmir

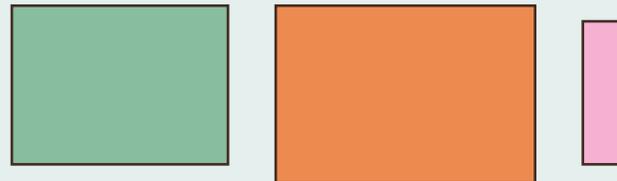

# 1990s

Alex Webb

Using Low light and street lights and faster film. Orange and teal

Cuba 1993

Istanbul 2001

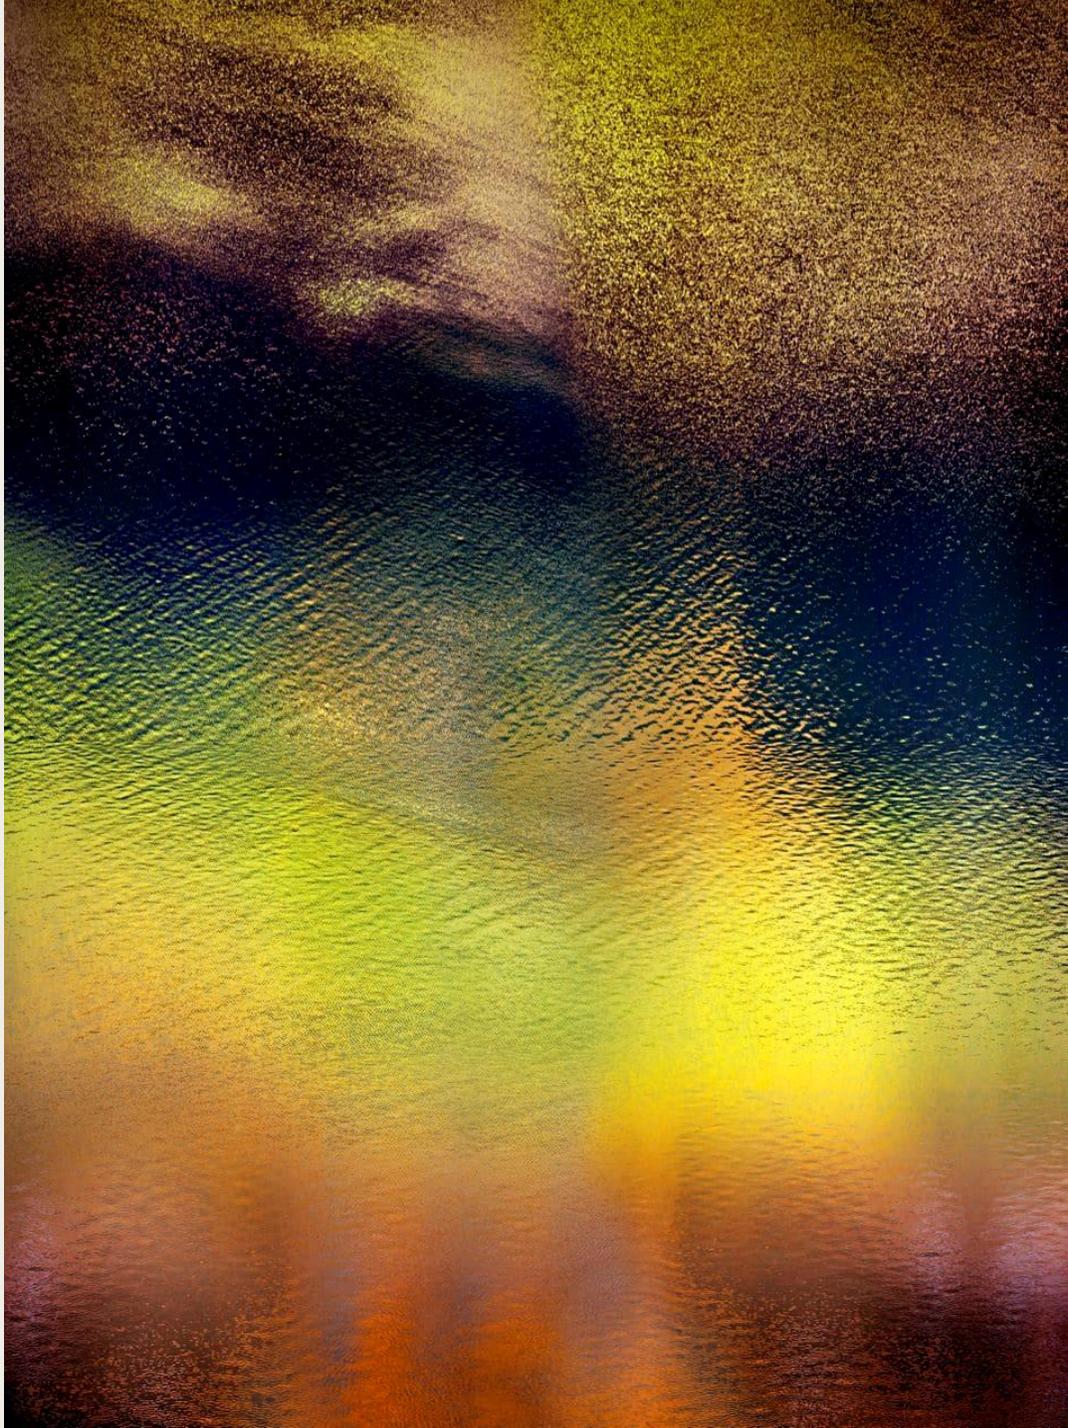

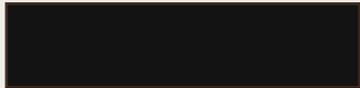

2000s

Nick Knight

Colorizing and powder pop freeze  
action with flash

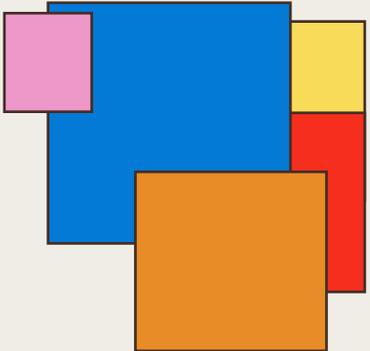

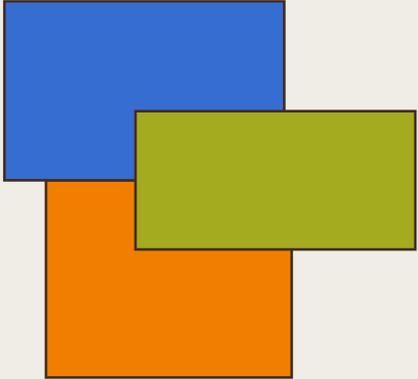

2010s Digital Photography  
Albert Watson – Ilse of Skye

Martin Parr 2020s

Colour Documentary Photography with flash

# Colour Theory in Photography

# The Colour Wheel

## Opposites attract!

Complementary colours sit opposite each other on the colour wheel.

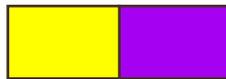

### Reds and Greens

### Blues and Oranges

### Yellows and Purples

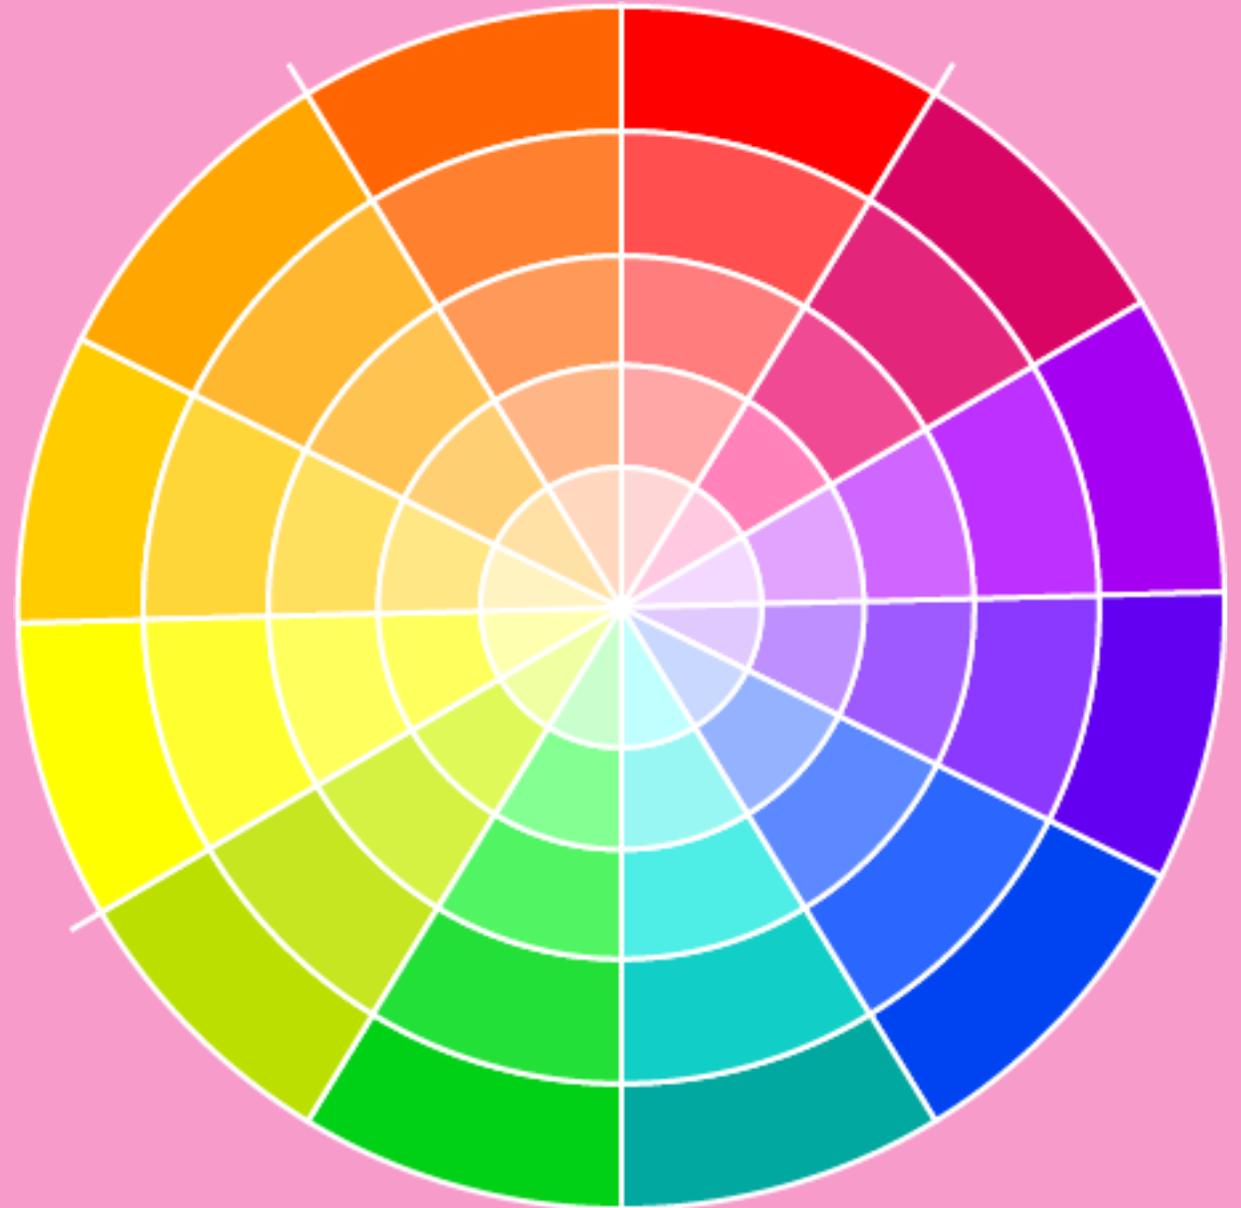

You can also think of it as **Hot and Cold** colours.

Reds, yellows and oranges work with purples, blues and greens

## Tonal Harmony

Tones of one colour also work together.

# Warm and Cool Tones

Push the colours of your image to a cool or warm tone depending on the mood you want to convey.

Soft calm colour is just as purposeful as vibrant energetic colour.

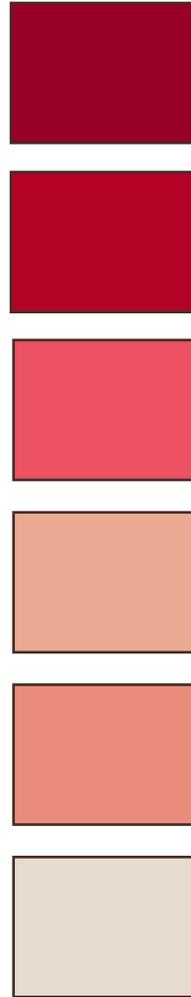

Steve McCurry

Cig Harvey

# Using a Single Colour

One colour many tones.

Milton Greene Siren 1952

# Spot Colouring

Use natural monochrome in a scene with pops of colour.

If removing background colour, try leaving just a hint of muted tones to allow your hero colour to pop softly.

Steve McCurry

Raghubir Singh - Kashmir

# Techniques

# Pick your colours first .....

Plan the image ahead and gather colours for a still life scene or portrait including your backdrop.

For street, landscape or nature focus on looking for one colour. It could be red, a tone of green, pink etc.

Once you've picked, you'll be surprised how your eye tunes to that colour.

# Backgrounds!

Black to pop! White to pop!

Contrast to pop!

Matching to be bold.

Use the sky.

Soft Focus, blurred background for pastels and to remove distractions.  
f1.8 – f5.6

Use a voile to soften background colour and detail

Remove the colour.

# Weston is full of colour!

Our seaside town is such a colourful place, we have vintage signage, classic car meets, seaside merchandise, incredible sunsets, colourful dressers, vibrant gardens, neons, murals, stained glass .....

This is why its one of the best places for street photography!

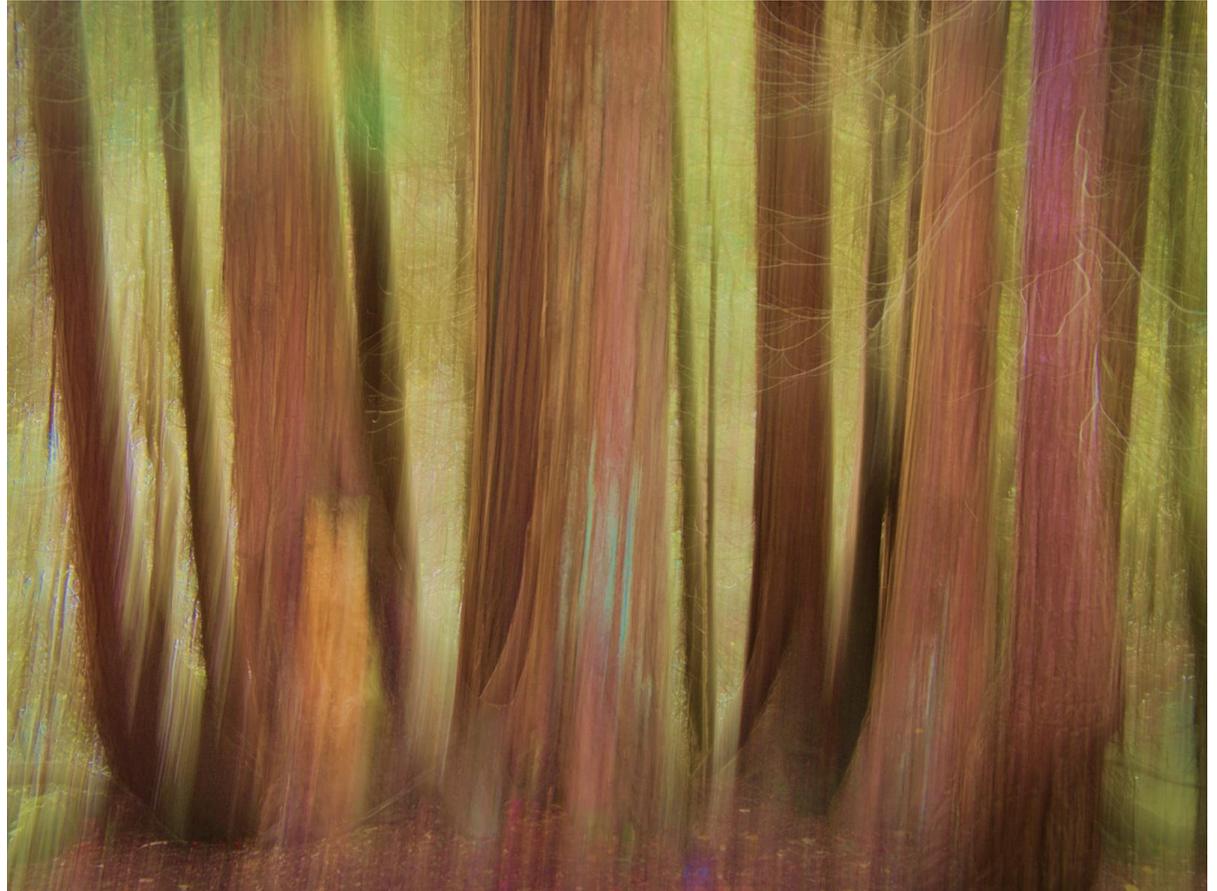

# Abstract

Use colours in a scene to paint a new image. ICM, Soft Focus, Close Ups, Reflections

Oliver Smart

Jane Richardson 2025

# Camera Settings to Enhance Colour

Shoot in RAW to get all the colour data.

**Underexpose** in bright light for vibrant colours

Use a **flash**.

Use gels over your flash to cast a colour.

Try **colour filters**.

Overcast, damp days can also produce richer colours.

For blocks of colours aim for a **low iso** to avoid digital noise.

Use slow shutter speeds, soft focusing and low f stops to soften colours.

Try a polariser to enhance colour.

Jim Brandenburg

# Controlled Colour

vs

# Uncontrolled Colour

- Still Life
- Portrait
- Abstract

Plan everything about your image beforehand, chose a backdrop, subject and colours that work together.

Most of your image can be achieved in camera.

**\*\* If shooting analogue, choose a film stock with colour tones you think will work best for your scene.**

- Street
- Landscape
- Wildlife

You have no control over the colour and have to find the colours you are looking for the in the wild.

Once you pick a colour it will be easier to tune your images to that tone.

Post processing will be key for these images.

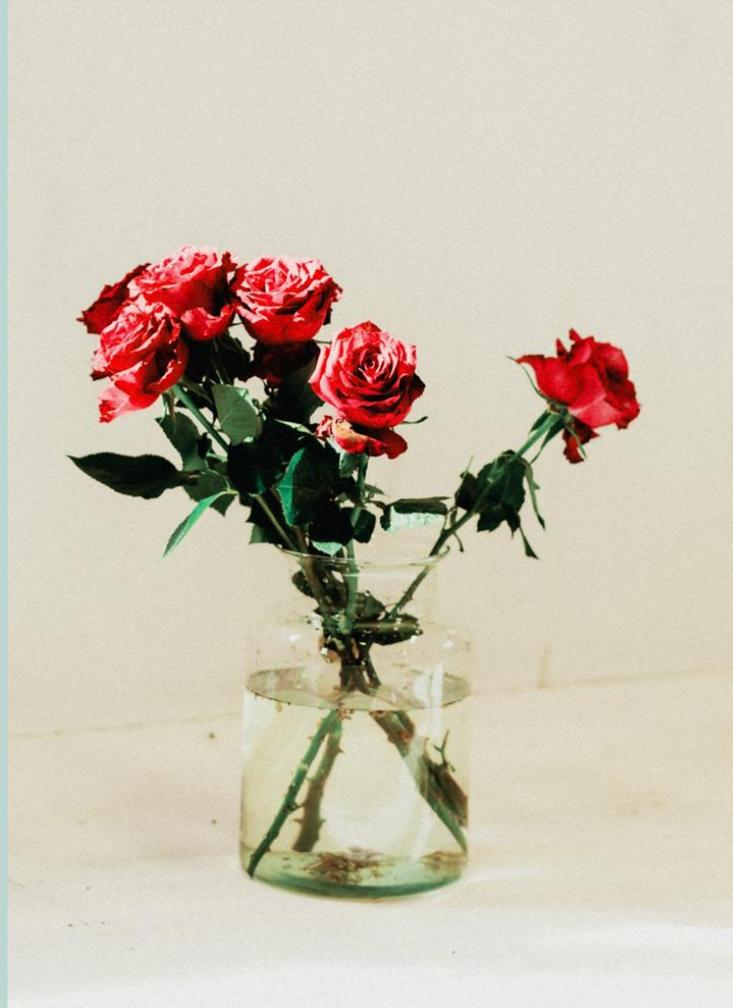

# Post Processing Colour

# Black Point

Deepen your blacks for richer more vibrant colour

Lighten your blacks point for a softer palette.

# Colour Grading

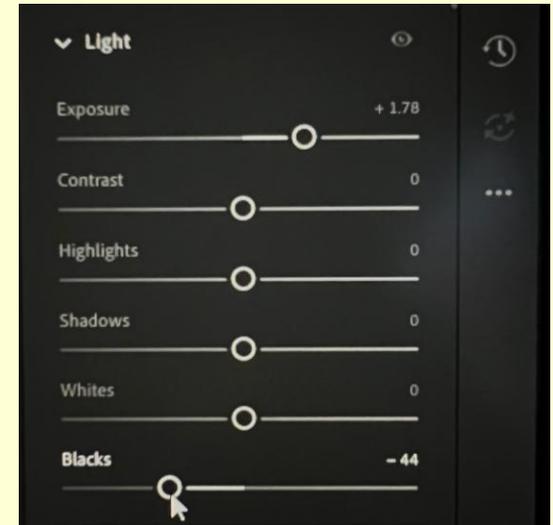

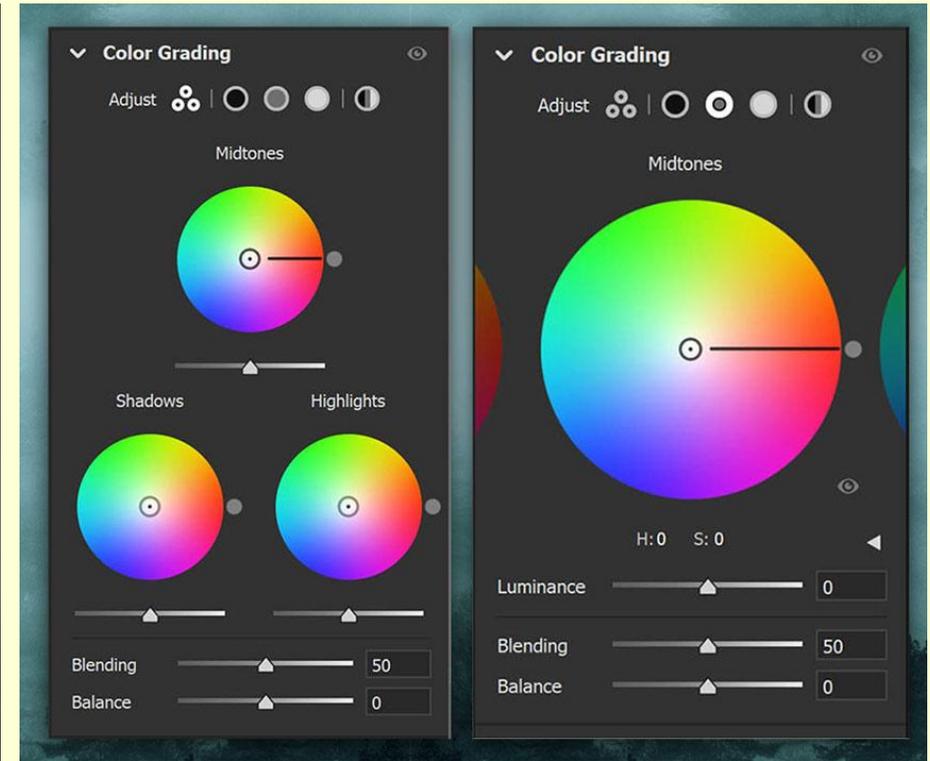

In most post processing software you can grade the colour of your image.

**Cool or warm** – adjust the warmth of the image

**Colour channels** – use the colour channels to enhance or reduce certain colours

**Highlights and shadows** – try adjusting the colour of the highlights and shadows to complimentary colours or similar tones.

**Saturation** – go easy! Try the above first and oversaturation doesn't always work.

# Using Presets & Filters

Try presets as a starting point.

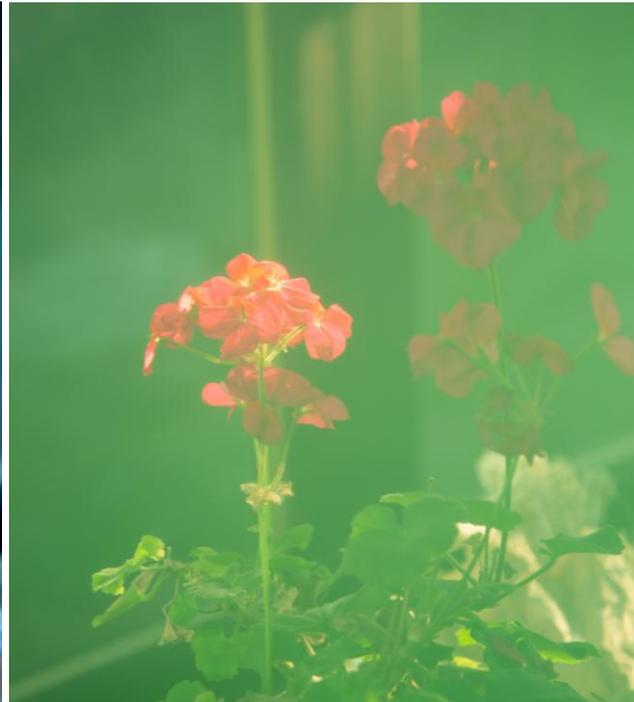

Develop your own colour styles and save as presets.

Replicate certain film stocks like Kodachrome

Use analogue colour filters in front of the lens.

Original

Yellow gel filter

Kodachrome preset

Muted tones preset

# Adding colour in Photoshop.

Use layers in photoshop to create ....

Coloured backdrops

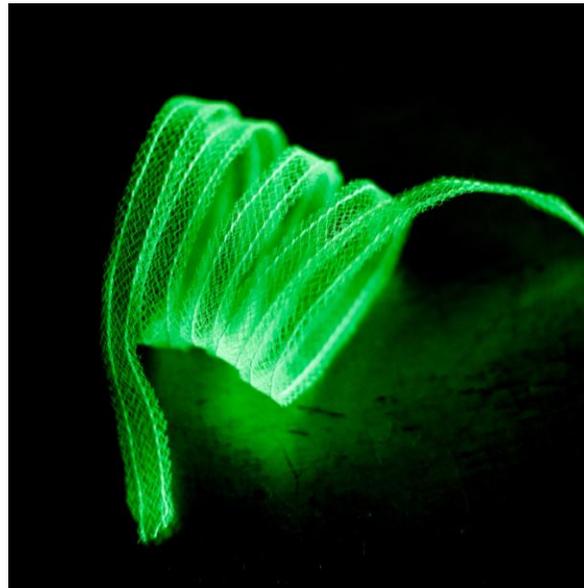

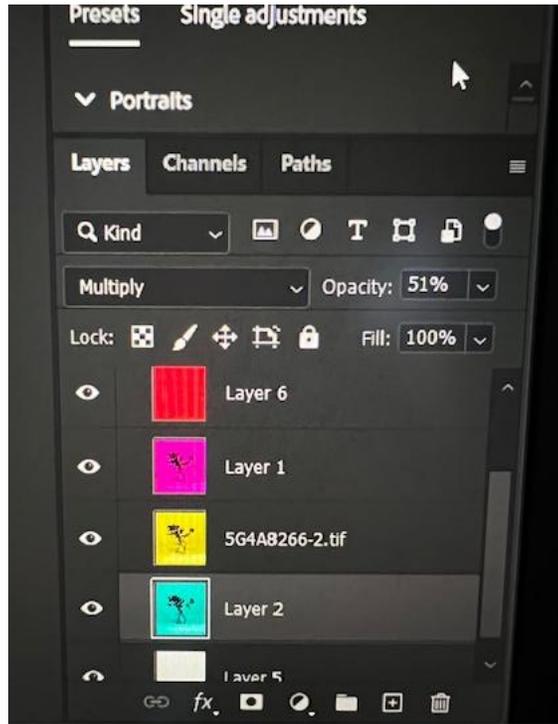

Filters and tones over your image

To paint your image.

Replace or remove colours

Think of photoshop just like a physical canvas or print.

Layers are just like layers of paint, transparent films, dyes and brushes.

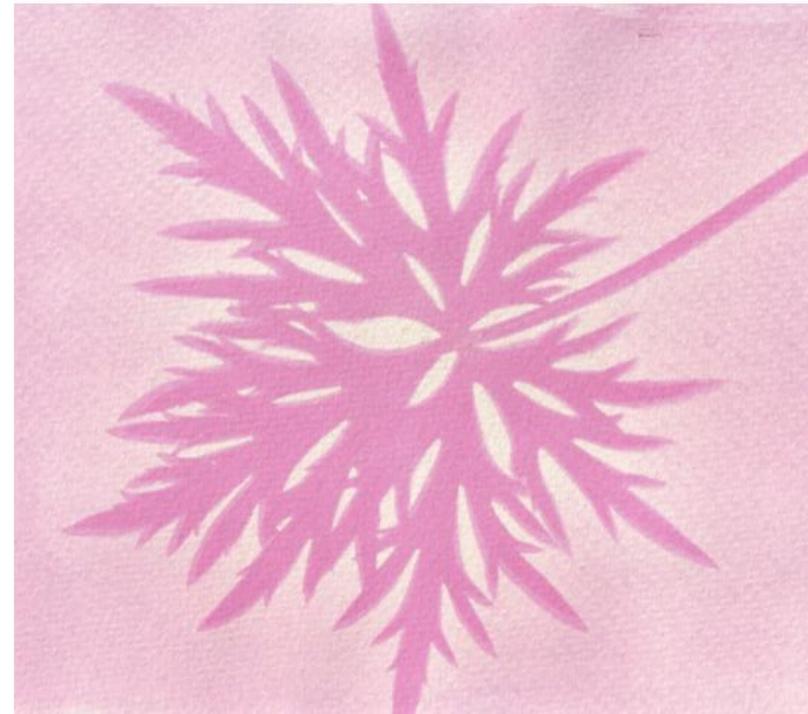

Dora Maar 1930

## Go Analogue!

Paint over a black and white image

Cyanotypes

Anthotypes using natural dyes

# Conclusion

Plan ahead!

Understand the impact of colour and tone.

Making colour the hero doesn't have to be bright and bold, it can be subtle and soft.

Be Purposeful with your colour.

Autochrome V&A Museum

Erwin Blumenfeld

# Next Competition

Print Section

'Make colour the hero'

&

Open Digital Section

Digital deadline – Tuesday 20<sup>th</sup> January (all submissions!)

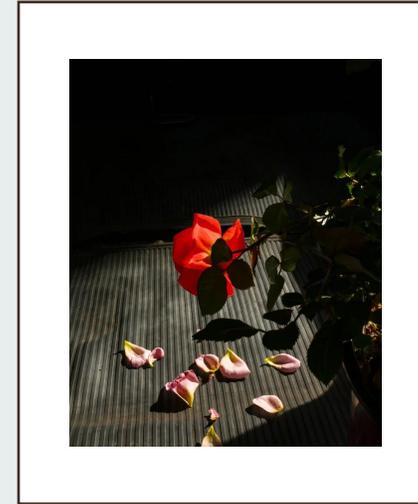

Print deadline – Tuesday 27<sup>th</sup> January

email to [a1ccccompetition@gmail.com](mailto:a1ccccompetition@gmail.com)

Prints must be in a 400mm x 500mm mount

Digital files must be **within** 1200px high and 1920px wide

Save JPEGs at Highest Quality (turn off compression)

Cig Harvey, Albert Watson, Sam Binding
